

data-normalization-job

Script | **Job details** | Runs | Data quality | Schedules | Version Control | Upgrade anal

Basic properties [Info](#)

Name

data-normalization-job

Description - *optional*

A spark job to drop field from the data

Descriptions can be up to 2048 characters long.

IAM Role

Role assumed by the job with permission to access your data stores. Ensure that this role has permission to your Amazon S3 sources, targets, temporary directory, scripts, and any libraries used by the job.

AWSGlueServiceRole-Lab-b3b1f610

Type

The type of ETL job. This is set automatically based on the types of data sources you have selected.

Spark

Glue version [Info](#)

Glue 2.0 - Supports spark 2.4, Scala 2, Python 3

Language

Python 3

Worker type

Set the type of predefined worker that is allowed when a job runs.

G 1X
(4vCPU and 16GB RAM)

Automatically scale the number of workers

☐ AWS Glue will optimize costs and resource usage by dynamically scaling the number of workers up and down throughout the job run. Requires Glue 3.0 or later.

Requested number of workers

The number of workers you want AWS Glue to allocate to this job.

10

Generate job insights

☒ AWS Glue will analyze your job runs and provide insights on how to optimize your jobs and the reasons for job failures.

Generate lineage events

- ☐ AWS Glue will capture Spark lineage events from your job runs and send them to Amazon DataZone or next generation of Amazon Sagemaker to visualize the table and column lineage.

Job bookmark [Info](#)

Specifies how AWS Glue processes job bookmark when the job runs. It can remember previously processed data (Enable), update state information (Pause), or ignore state information (Disable).

Choose one job bookmark

Job Run Queuing

- ☐ Enable job runs to be queued to run later when they cannot run immediately due to service quotas

Flex execution [Info](#)

- ☐ Reduce costs by running this job on spare capacity. Ideal for non-urgent workloads that don't require fast jobs start times or consistent execution times. See recommendations, limitations and pricing in the help panel by clicking on the Info link above.

Number of retries

0

Job timeout (minutes)

Set the maximum execution time. The default is 480 minutes (8 hours) for a Glue 5.0 ETL job and 2,880 minutes (48 hours) for Glue 4.0 and below. No job timeout is defaulted for a Glue Streaming job.

2880

Usage profile

-

▼ Advanced properties

Script filename

drop_field.py

Script path

S3 location of the script. Path must be in the form s3://bucket/prefix/path/. It must end with a slash (/) and not include any files.

s3://code-bucket-b3b1f610/

Job metrics [Info](#)

- ☐ Enable the creation of CloudWatch metrics when this job runs.

Job observability metrics [Info](#)

- ☐ Enable the creation of observability metrics when this job runs.

JSON2Parquet-job

Script | **Job details** | Runs | Data quality | Schedules | Version Control | Upgrade anal

Basic properties [Info](#)

Name

JSON2Parquet-job

Description - optional

A spark job to convert JSON file to parquet

Descriptions can be up to 2048 characters long.

IAM Role

Role assumed by the job with permission to access your data stores. Ensure that this role has permission to your Amazon S3 sources, targets, temporary directory, scripts, and any libraries used by the job.

AWSGlueServiceRole-Lab-b3b1f610
